

# “Radiation Protection and the Safety of the Radiation Sources”

INTEREST 7<sup>th</sup> Wave (13 June - 22 July)

**By:**

**Yasmin Mohye Mahmoud Sarhan**

physics assistant lecturer

Egypt University of Informatics

**Under supervision of:**

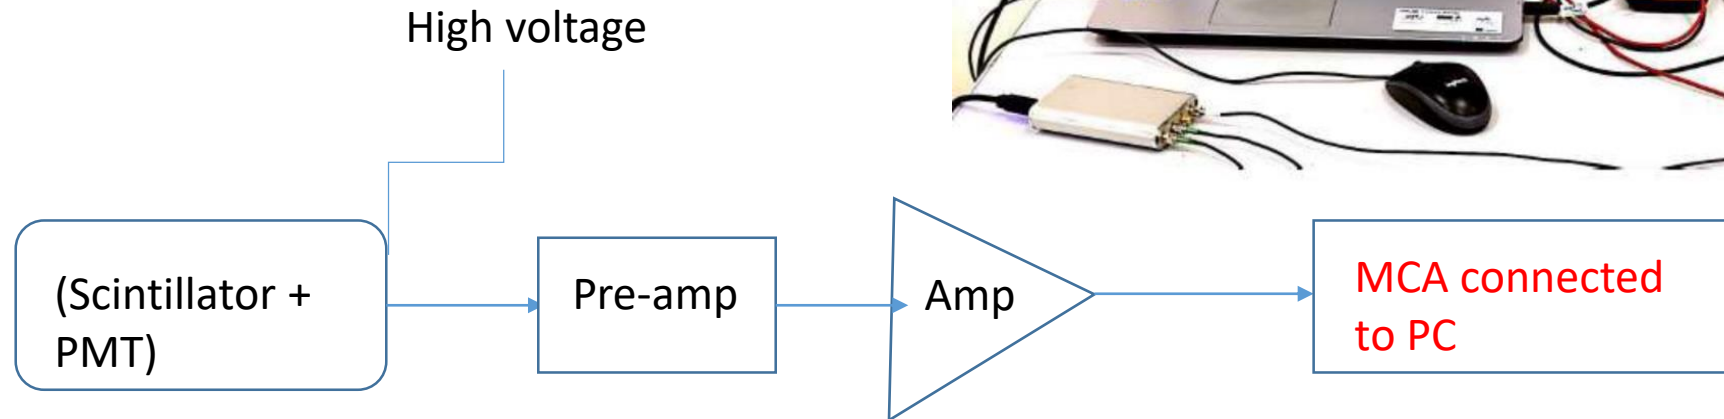

**Dr. Said M. Shakour**

Dzhelepov Laboratory of Nuclear Problems, JINR

# Scintillation detectors

We used two types of Scintillations Detectors, BGO and NaI(Tl) scintillation crystals.

Scintillation detectors consist of scintillator crystal, photomultiplier tube (PMT) connected to high voltage and the signals are amplified and received on multichannel analyzer

# Resolution of BGO

Testing the Resolution of the BGO detector when operating using different applied voltage:

When increasing the voltage from 1200 V to 2000 V, The percentage resolution values were calculated using the equation:

$$R(\%) = (\sigma / \text{Mean}) * 2.35 * 100 \quad \text{While } \sigma \text{ and Mean are fitting parameters}$$

Fitting to get  $\sigma$  and Mean:

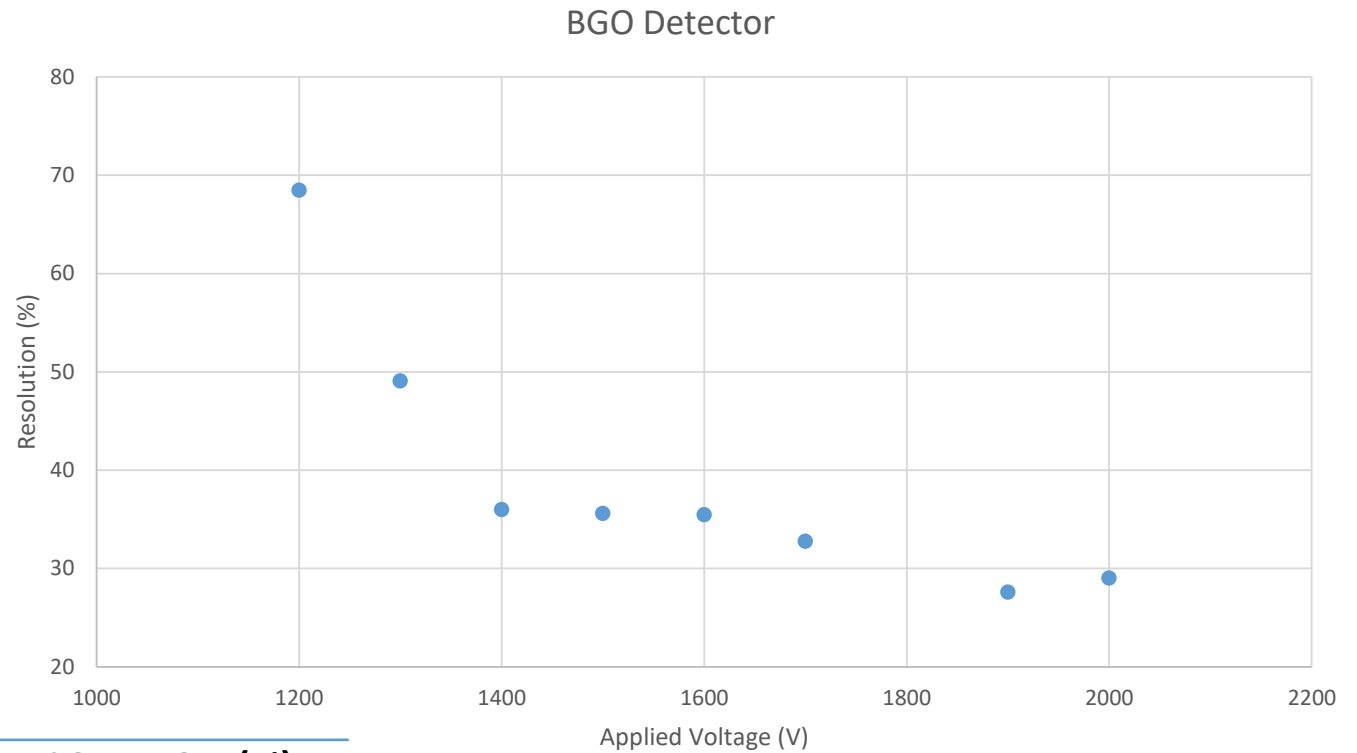

## The relation between Resolution (%) Vs. Applied voltage (V)

After getting the values of  $\sigma$  and Mean

Substitute in this formula:

$$R(\%) = (\sigma/\text{Mean}) * 2.35 * 100$$

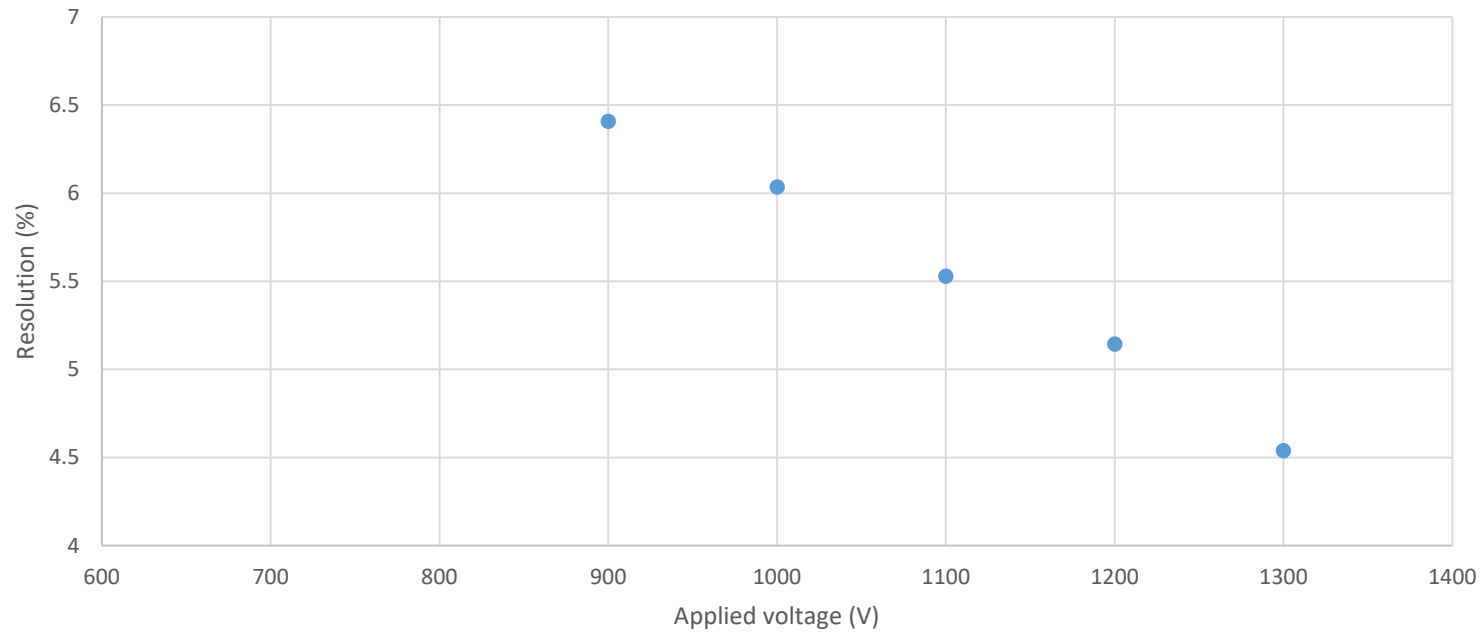

No.	Mean	Sigma	Applied voltage (V)	RESOLUTION (%)
1	1.6029	0.467104	1200	68.48177678
2	1.3994	0.292262	1300	49.07929827
3	1.924	0.2948	1400	36.00727651
4	2.9889	0.4528	1500	35.60105725
5	4.401	0.6646	1600	35.48761645
6	6.0835	0.8488	1700	32.78836196
7	10.67	1.2539	1900	27.61635426
8	13.55	1.674	2000	29.03247232

## NaI Detector:

### Resolution Vs. applied voltage for The first peak (1173 KeV)

No.	Mean	Sigma	Applied voltage	RESOLUTION(%)
1	23.65	0.6448	900	6.407103594
2	40.61	1.043	1000	6.035582369
3	65.76	1.547	1100	5.528360706
4	98.65	2.159	1200	5.143081602
5	137.4	2.654	1300	4.53922853

NaI Detector: Peak 1173 KeV  
Resolution(%) Vs. Applied voltage

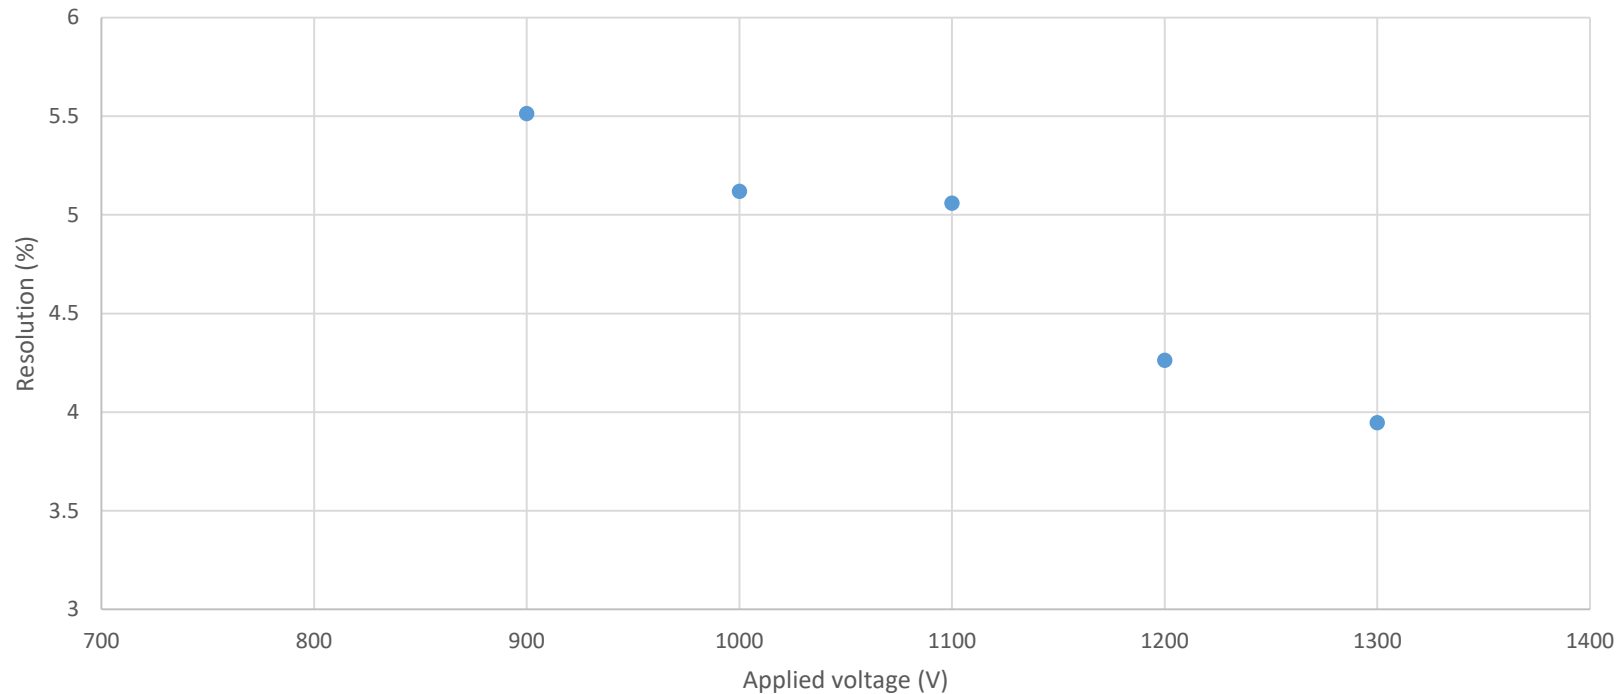

# NaI Detector:

## Resolution Vs. applied voltage for The second peak (1332.5 KeV)

No.	Mean	Sigma	Applied voltage	RESOLUTION (%)
1	26.57	0.6234	900	5.5137
2	45.46	0.9904	1000	5.119754
3	73.25	1.577	1100	5.059317
4	108.5	1.968	1200	4.262488
5	148.8	2.499	1300	3.946673

Resolution (%) Vs. Applied voltage (V) for Peak 1332.5

# Calibration Curve for BGO detector

**1252.85 KeV**

## Calibration Curve for BGO detector:

$$Y = 102.7X - 3.4121$$

Where Y is the Energy in KeV and X is the channel number or the mean value.

To identify unknown sources of radiation, we can do it by knowing the mean value of the peak and substituting in the equation above to get the energy and identify the isotope using the libraries known.

channel	Energy (KeV)
6.4685	662
12.2481	1252.85
24.4264	2505.7

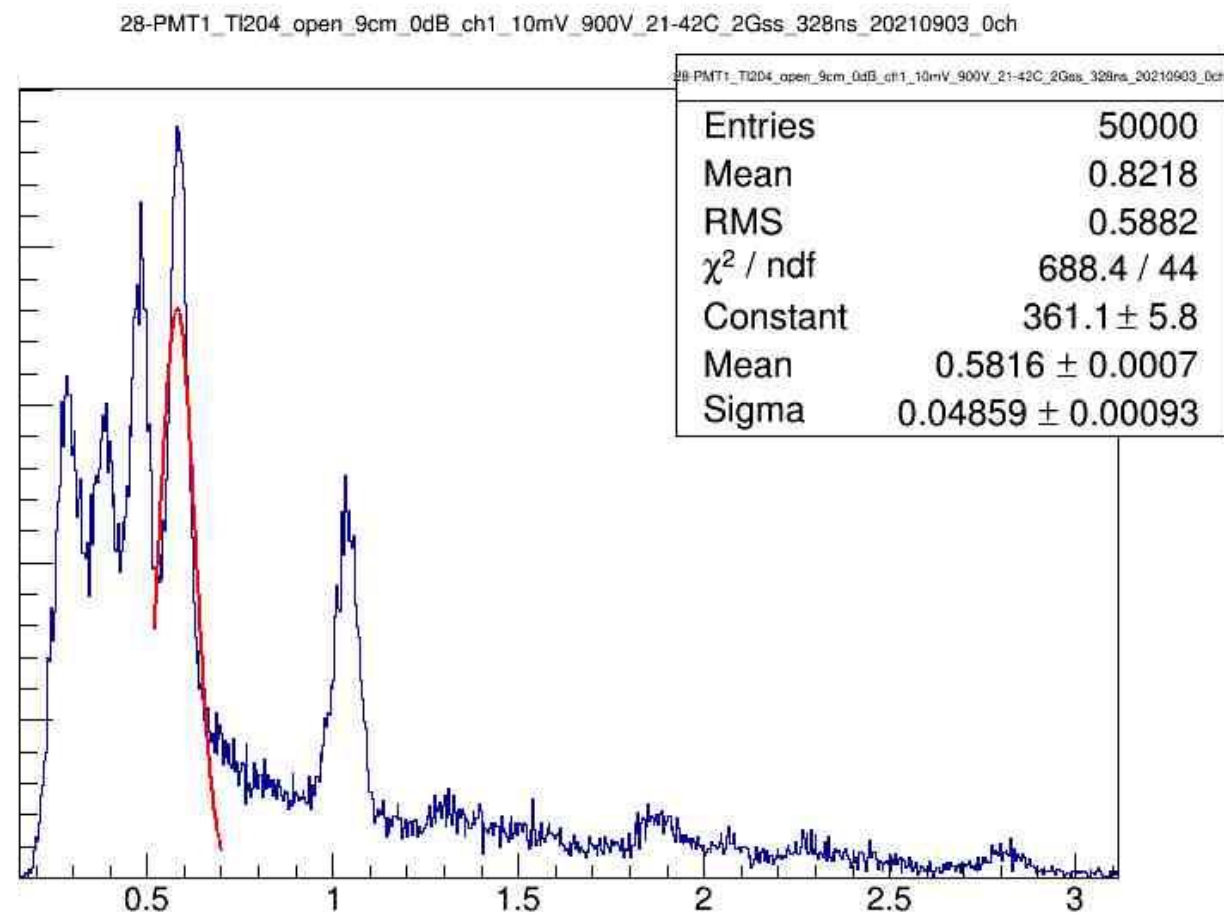

## Identifying the unknown isotopes using the calibration curve of BGO:

7-co60+Cs137\_Nal\_ch4\_800V\_5mV\_T24-33.9\_0.7Gss\_599ns\_16122019\_0ch

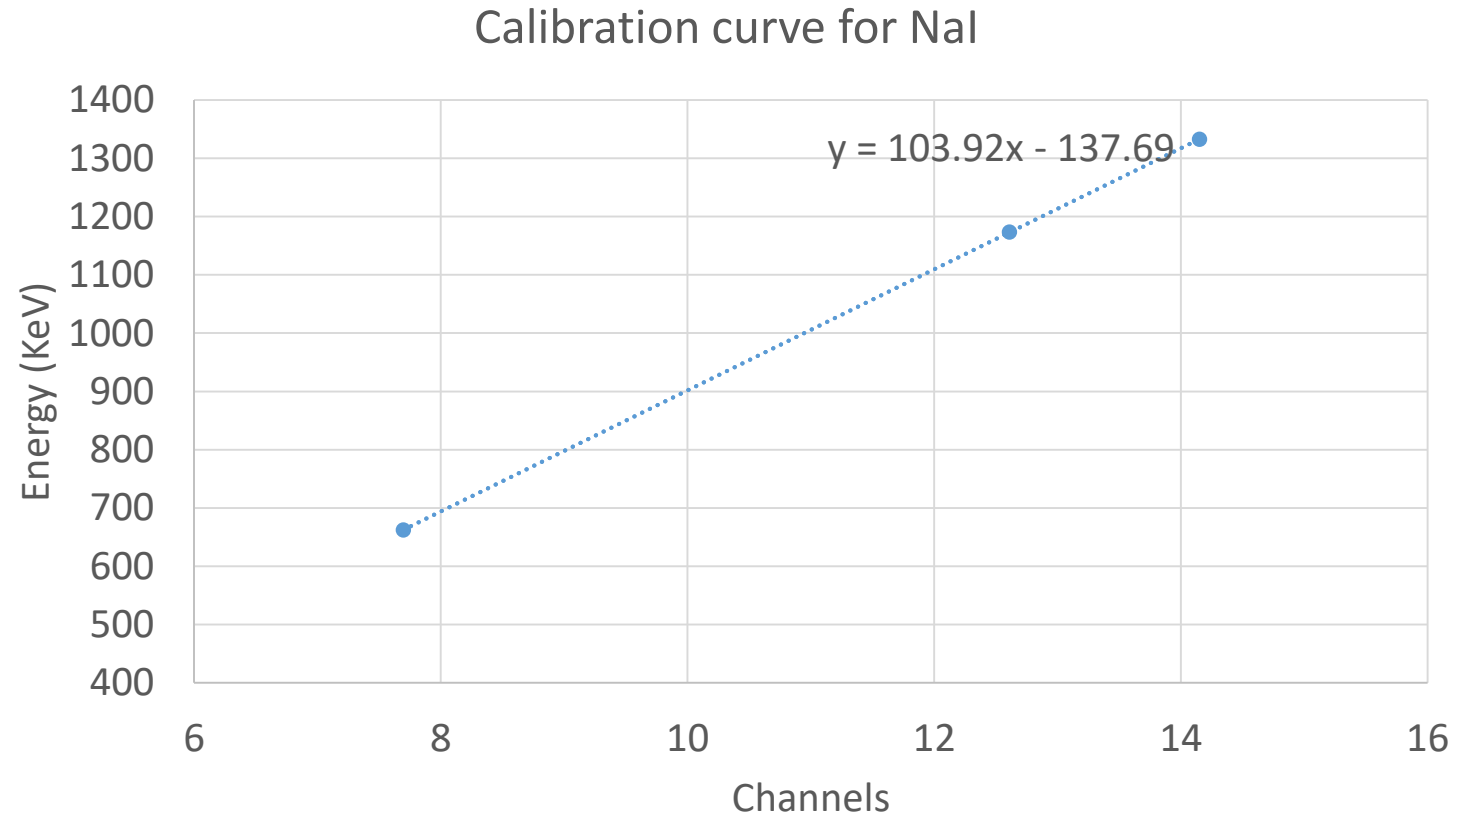

## Calibration Curve for NaI detector:

$$y = 103.92x - 137.69$$

Where Y is the Energy in KeV and X is the channel number or the mean value.

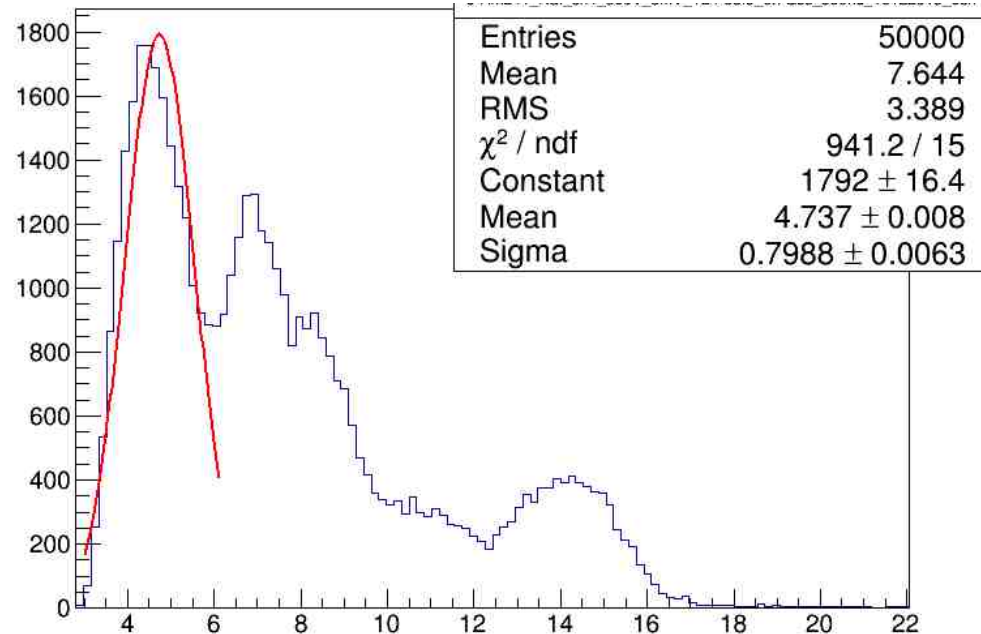

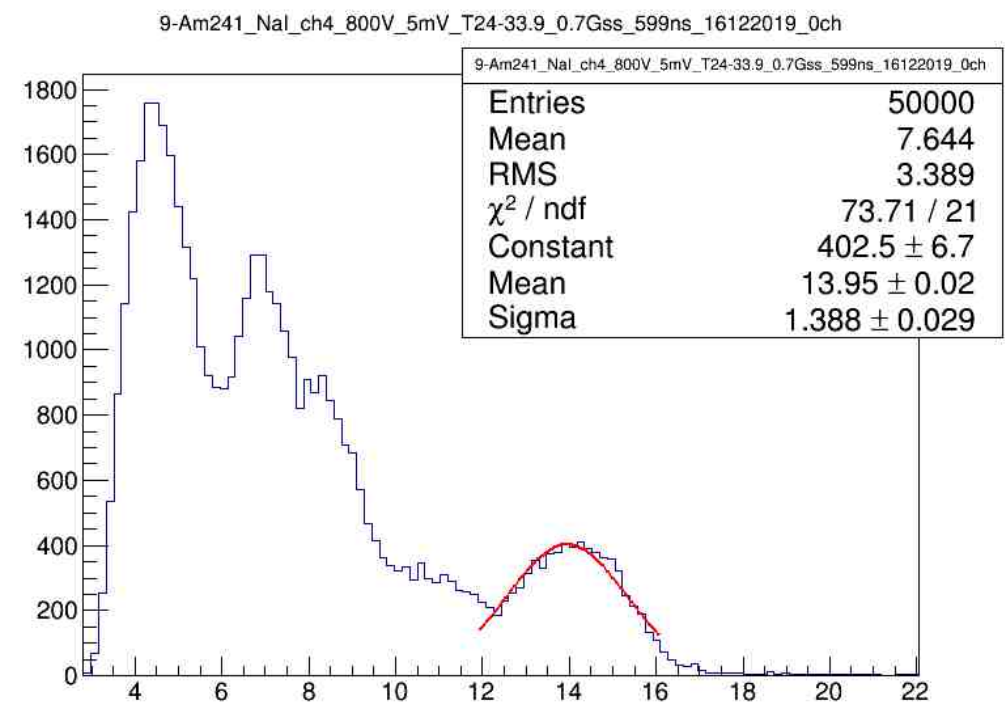

channel	Energy (KeV)
<b>7.696</b>	662
<b>12.61</b>	1173.2
<b>14.15</b>	1332.5

## Identifying unknown source in NaI Detector:

Channel	Energy (KeV)	Peak ID
<b>4.737</b>	354.57904	Pb-214
<b>6.948</b>	584.34616	Ti-208
<b>13.95</b>	1311.994	Ca-47

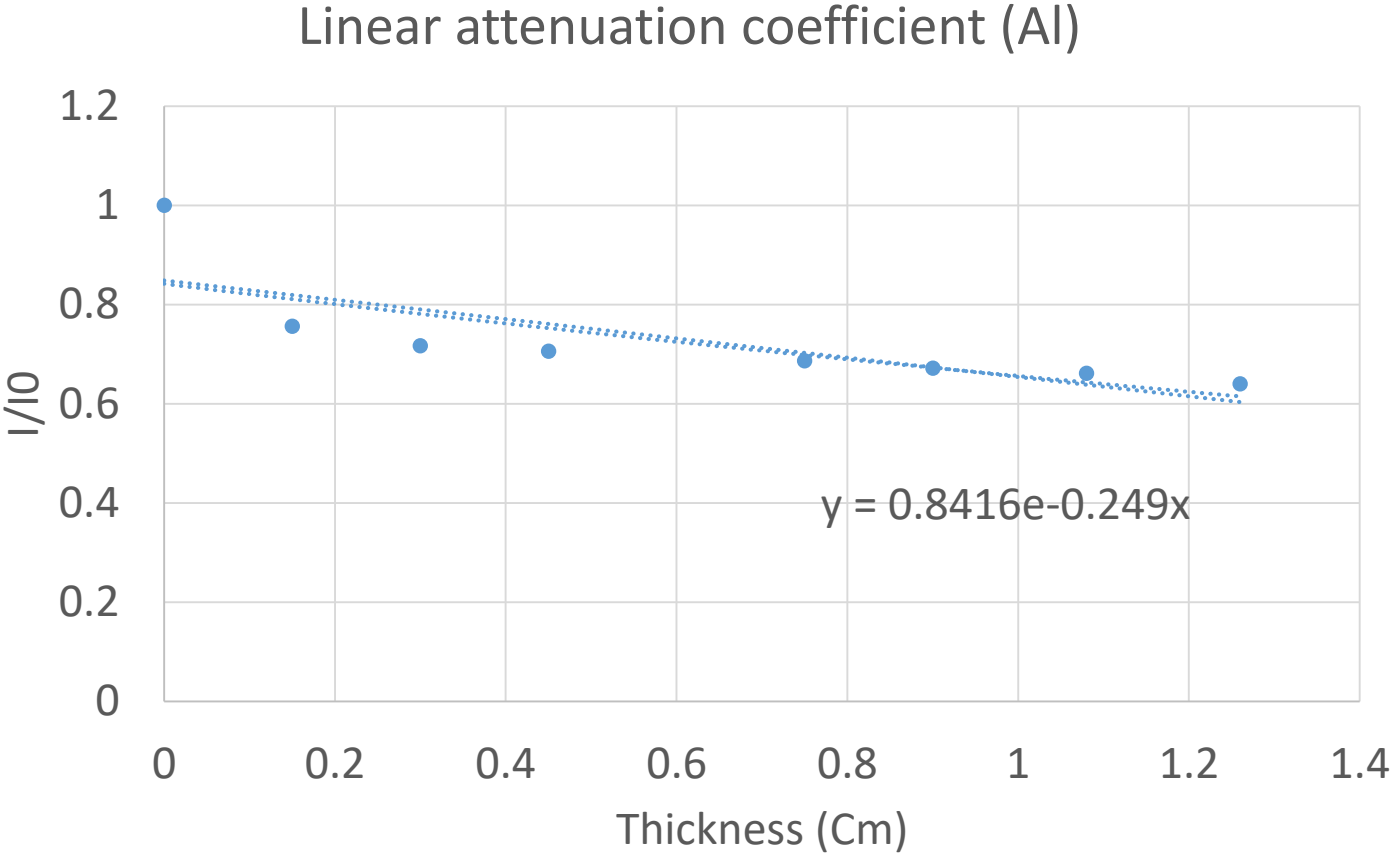

**Attenuation coefficient:**

$$I = I_0 e^{-\mu x}$$
$$\frac{I}{I_0} = e^{-\mu x}$$

**Attenuation coefficient for Aluminum:**

Thikness (cm)	I/I <sub>0</sub>
0	1
0.15	0.75573
0.3	0.71623
0.45	0.70569
0.75	0.68596
0.9	0.67155
1.08	0.66103
1.26	0.63939

$\mu = 0.249 \text{ Cm}^{-1}$

## Attenuation coefficient for Copper:

Thickness (cm)	I/I <sub>0</sub>
0	1
0.2	0.73931
0.25	0.7357
0.4	0.68065
0.8	0.58611
1	0.53827
1.2	0.48042

$$\mu = 0.517 \sim 0.52 \text{ Cm}^{-1}$$

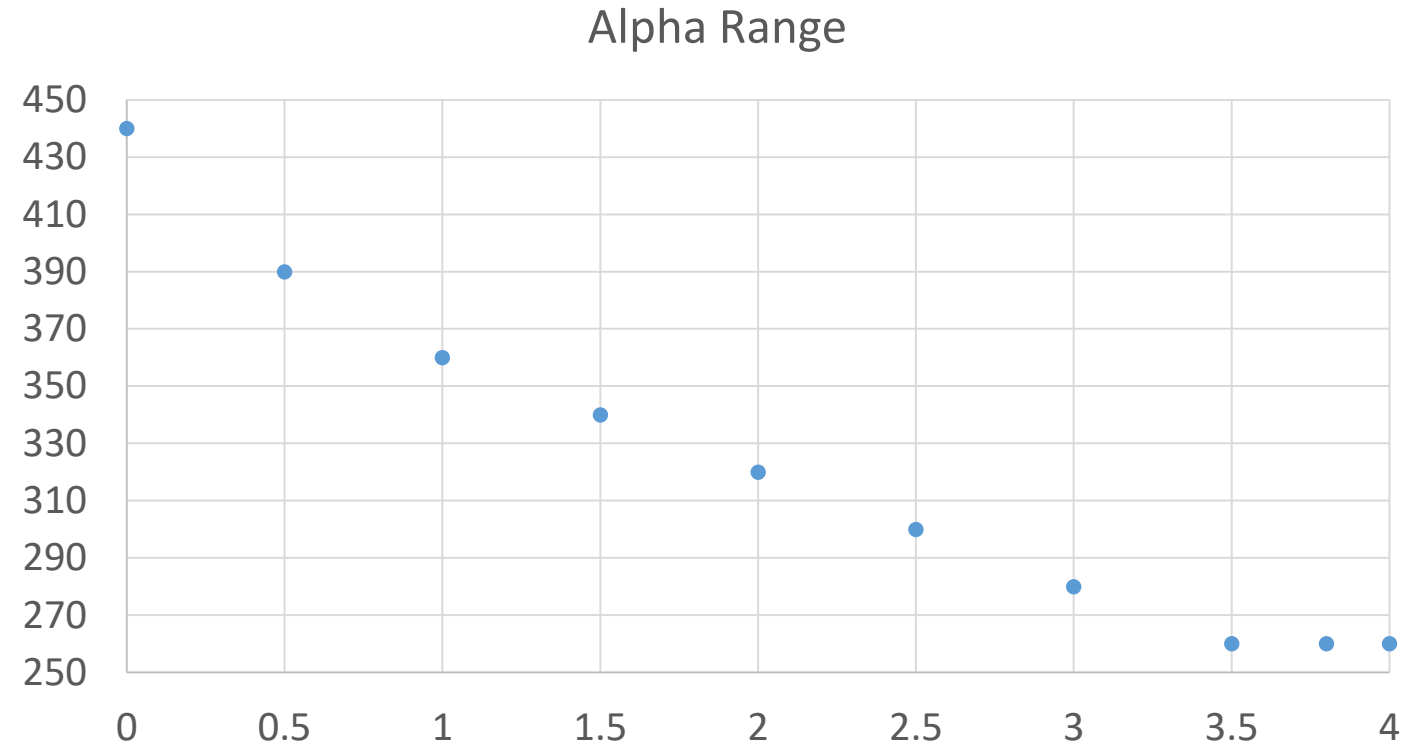

## Alpha Range:

Source of Pu-239

Energy = 5.5 MeV

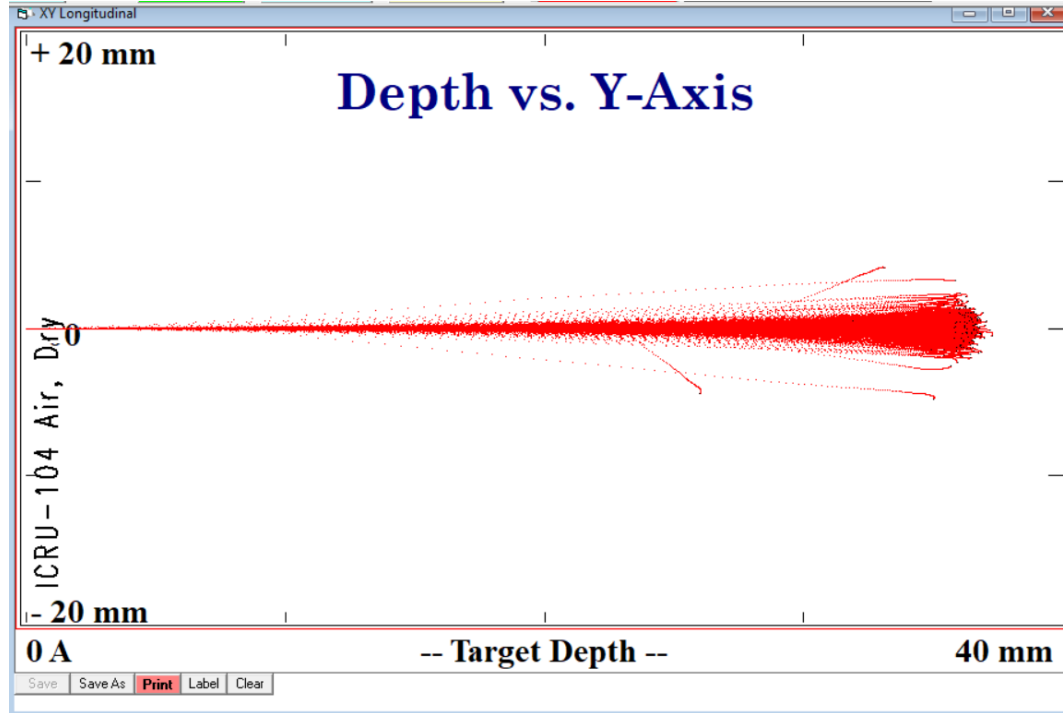

The range of alpha is 3.5 cm

Distance (cm)	counts/ sec
0	440
0.5	390
1	360
1.5	340
2	320
2.5	300
3	280
3.5	260
3.8	260
4	260

## SRIM (Alpha stopping power) :

5 MeV Alpha is completely stopped at 3.61 cm deep in Dry air

## Pixel detectors:

It consists of 2 parts: Sensor and Electronic chip

It has high resolution

Pixel size is  $55\ \mu\text{m} * 55\ \mu\text{m}$
